

Net Revenue Management Analysis

Shampoo Category — Portfolio Case Study

Case-study client	HealthMax
Role	Category Manager
Category	Shampoo / FMCG
Primary tool	Microsoft Excel
Analytical focus	Net Revenue Management (NRM)

Case context: The analysis applies Net Revenue Management principles to the shampoo category, covering performance measurement, pricing and mix, profitability, category expansion, new product launch, trade terms, promotions and forecasting.

Prepared as a portfolio project based on the completed DataCamp FMCG case study workbook.

1. Executive Summary

As a Category Manager for HealthMax, the objective of this case study is to identify opportunities to grow shampoo-category revenue while considering price, product mix, profitability and promotional effectiveness. The analysis begins with historical sales and market/category performance and then moves into product opportunity sizing and a 2024 revenue bridge.

2022 net sales were \$20.48M, with estimated 2023 net sales of \$20.61M. The Excel forecast establishes a 2024 baseline of \$20.81M. Organic shampoo was the fastest-growing subcategory at 275.82% growth from 2018 to 2022.

The quantified revenue bridge adds \$202.7K of natural growth, \$336.9K from the organic shampoo initiative and \$266.0K from the 50ml shampoo initiative, resulting in estimated 2024 net sales of \$21.41M.

Headline KPI	Result
2022 Net Sales	\$20.48M
2023 Estimated Net Sales	\$20.61M
2024 Baseline Forecast	\$20.81M
Organic Shampoo Opportunity	+\$336.9K
50ml Shampoo Opportunity	+\$266.0K
Estimated 2024 Net Sales	\$21.41M

2. Business Context & NRM Framework

The DataCamp case study positions the analyst as a Category Manager for HealthMax, an FMCG company active in the shampoo business. The work is structured around Net Revenue Management and its commercial levers.

NRM area	Application
Performance measurement	YTD, MAT, market share and value-sales analysis
Brand portfolio / pricing	Net sales contribution, price-per-ml and pack-price comparisons
Profitability	Gross profit, gross margin and profitability matrix
New category opportunity	Historical subcategory growth and organic-unit opportunity
New product launch	Organic product economics and 50ml product economics
Trade Terms Management	HealthMax supplier/brand growth assessment
Promotion Management	Baseline, uplift, cost and ROI
Forecasting	2024 baseline forecast
Waterfall	2023-to-2024 revenue bridge

This structure makes the project an integrated commercial analytics case rather than a collection of unrelated Excel exercises.

3. Data & Methodology

The workbook combines external category/sales information with internal product economics. The analysis was performed in Excel using formulas, PivotTables, charts, profitability calculations, forecasting and a waterfall.

Data / analysis	Purpose
Sales and units	Measure YTD, MAT and annual performance
Market share	Assess brand-level competitive position
Internal product economics	Evaluate net price, COGS, gross profit and gross margin
Category growth	Identify structurally attractive subcategories
Pack-price architecture	Compare consumer price by pack size
Promotion data	Measure baseline, uplift, costs and ROI
Forecast data	Establish the 2024 baseline

Core Excel techniques: SUMIFS, YTD/MAT calculations, PivotTables, market-share calculations, gross-margin calculations, scatter/profitability matrix, price-per-ml analysis, promotion ROI, Excel Forecast Sheet and Waterfall chart.

4. Market & Category Performance

The category analysis compares subcategory growth from 2018 to 2022. Organic shampoo recorded 275.82% growth, materially outperforming the other analyzed subcategories.

Subcategory	Growth 2018–2022
Anti-dandruff	11.53%
Color-safe	-35.22%
Moisturizing	19.14%
Organic	275.82%
Volumizing	-11.05%

Business insight: Organic was the clearest structural growth opportunity in the category, which provided the rationale for modeling an organic shampoo launch.

5. Profitability & Pack-Price Architecture

The profitability analysis evaluates products using gross margin and net sales contribution. This provides a portfolio view of economic quality alongside commercial scale.

The matrix shows that the portfolio contains products with generally strong gross margins but different levels of revenue contribution. This supports prioritizing products using both profitability and sales importance.

Pack-price architecture

Pack	Example Net Price	Price / ml
50ml	\$2.30	Not populated in workbook
100ml	\$3.10	\$0.050
125ml	\$4.25	\$0.056
150ml	\$3.50	\$0.047
200ml	\$5.00	\$0.045

The completed workbook leaves the new 50ml row's Price per ml cell blank; this does not affect the modeled revenue or gross-margin calculations.

6. Trade Terms Management

Trade Terms Management was assessed through HealthMax's year-over-year value-sales growth by brand. The purpose is to understand supplier/brand performance rather than evaluating a product in isolation.

Year	Shinez	Starbust	HealthMax Total
2019	-1.89%	-6.02%	-4.64%
2020	7.66%	1.77%	3.79%
2021	0.90%	1.24%	1.12%
2022	6.74%	-0.01%	2.38%

HealthMax's total growth was negative in 2019, recovered in 2020 and 2021, and reached positive growth again in 2022. The brand-level results show that growth was not uniform across the portfolio.

7. New Category Opportunity — Organic Shampoo

Organic shampoo was selected because it was the fastest-growing subcategory. March 2023 MAT organic units were 850,749, and the case modeled 2024 organic units at 1,020,899.

Candidate	Est. Share	Est. Units	Net Price	Net Sales	Gross Margin
HerbEssentials	10.00%	102,090	\$3.50	\$357,314.65	61.43%
Herbashine	12.00%	122,508	\$2.75	\$336,896.67	67.27%

The two modeled organic products generate approximately \$357.3K and \$336.9K in net sales respectively. The waterfall uses \$336.9K as the quantified organic-shampoo contribution.

8. New Product Launch — 50ml Shampoo

The pack-price architecture analysis supports evaluating a smaller 50ml format. The completed workbook models Starbust Ultra Soft 50ml using price, COGS and volume economics.

Metric	Value
Brand / Product	Starbust Ultra Soft
Pack Size	50ml
Retail Price	\$3.75
Net Price	\$2.30
COGS	\$0.70
Volume 2022	115,634.8
Net Sales 2022	\$265,960.04
Gross Profit / Unit	\$1.60
Gross Profit / Product	\$185,015.68
Gross Margin	69.57%

The modeled 50ml initiative contributes \$266.0K to the revenue bridge and has an estimated gross margin of 69.57%.

Promotion Management

Three Shinez promotions in 2022 were evaluated against a non-promotion baseline. The analysis measures sales uplift, promotional cost and ROI.

Promotion	Mechanism	Uplift	Cost	ROI
Promotion 1	Buy 2, get 1 free	\$604.8K	\$620.0K	-2.45%
Promotion 2	Buy 2, get 20% off	\$357.9K	\$320.0K	11.84%
Promotion 3	2nd at 50% off	\$572.8K	\$540.0K	6.08%

Key finding: Promotion 2 (“Buy 2, get 20% off”) produced the highest ROI at 11.84%. Promotion 1 generated the largest absolute uplift but had a negative ROI after promotional costs. Uplift alone is therefore not sufficient to judge promotion effectiveness.

10. Forecasting

The Excel Forecast Sheet extends the historical market-value series into 2023 and 2024. A ratio from the 2022 market value was used in the workbook to derive the net-sales series used for the revenue bridge.

Year	Market Value / Forecast	Net Sales
2022	\$31,442,892.00	\$20,480,715.00
2023	\$31,635,324.07	\$20,606,058.00
2024	\$31,946,447.75	\$20,808,712.24

The resulting baseline forecast is \$20.81M for 2024. This is distinct from the final Waterfall estimate because the Waterfall begins with estimated 2023 net sales and adds natural growth and NRM initiatives.

11. Revenue Impact — Waterfall

The Waterfall consolidates the modeled drivers into one executive-level revenue bridge.

Driver	Impact
Estimated Net Sales 2023	\$20,606,058.00
Natural Growth	+\$202,654.24
Organic Shampoo	+\$336,896.67
50ml Shampoo	+\$265,960.04
Estimated Net Sales 2024	\$21,411,568.95

Final modeled outcome: estimated 2024 net sales of \$21.41M. The two product initiatives contribute a combined \$602.9K above natural growth.

12. Recommendations

Prioritize organic shampoo expansion. Organic is the strongest historical growth category at 275.82% and the modeled organic launch includes a \$336.9K contribution to the revenue bridge.

Evaluate the 50ml entry pack. The modeled Starbust Ultra Soft 50ml provides \$266.0K in incremental net sales with an estimated 69.57% gross margin.

Optimize promotions using ROI. Promotion 2 had the best ROI, while Promotion 1 had the largest uplift but negative ROI. Promotional decisions should consider incremental economics, not uplift alone.

Manage revenue and margin together. The profitability matrix and product economics show why net sales contribution and gross margin should be considered together when prioritizing portfolio actions.

Track actual performance against the modeled bridge. Use the \$20.81M baseline and \$21.41M modeled outcome as reference points for evaluating 2024 realization.

13. Conclusion

This case study demonstrates an end-to-end FMCG Net Revenue Management workflow performed in Excel. As a Category Manager for HealthMax, the analysis connects sales and market measurement with profitability, pricing and pack architecture, trade terms, promotion effectiveness, category expansion, product launch and forecasting. The modeled revenue bridge produces estimated 2024 net sales of \$21.41M.
